

The **GASTEC Detector Tube Sampling Pump** provides a simple and rapid determination of a wide variety of gases and vapours. The procedure uses pre-calibrated, easy-to-read glass tubes. An air sample is drawn through the reagent contained in the tube. The length of the stain which develops indicates the concentration of contaminant gas in the sample. The Gastec gas detection tubes (ordered separately) are single-use and disposable.

Features:

- Accurate
- Rugged piston style pump
- Finish indicator
- Choice of 50ml/100ml

Typical Applications:

- Gas and vapour detection in a wide variety of industries

GASTEC Detector Tube Sampling Pump

Standard Accessories (included):

- Lubricant
- Spare rubber inlet

Consumables (non-stock):

- Over 400 tubes are available for this pump
